DETAILED ACTION

Allowable Subject Matter

1. Claims 1-20, 23-30, 32-36, 39-45, 48, 50-53 are allowed.

The following is an examiner's statement of reasons for allowance:

Amended independent claim 1 recites, among other features, the following: first wireless network that stores a hierarchical generic service name tree containing a plurality of generic service names each associated with a default Internet information resource, wherein a first subset of said generic service names is mapped in said tree to a plurality of associated default Internet information resources by said first wireless network, and wherein a second subset of said service names is mapped in said tree to a plurality of non-default Internet information resources by said first wireless network, thereby overriding said default associations for said second subset of service names within said first wireless network.

None of the applied references teaches or suggests submitting a first generic service name to a first wireless network that stores a hierarchical generic service name tree as recited. For example, the primary reference, Huttenen et al., fails to teach or suggest the recited hierarchical generic service name tree having the first and second subsets of service names, and the overriding of default associations for the second subset, as recited. Instead, the alleged generic service name of Huttenen et al. ("regioninfo.com") is only used by Huttenen et al. as a signal to the AN (access node) that it needs to query the MSC (mobile switching center) or VLR (visitor location register) to look up the location of the user before modifying the user's query and sending it to the DNS.

The secondary reference, Jackel et al. does not teach or suggest the claimed hierarchical generic service name tree. For example, those images each display information regarding the status of a web site, and there is no discussion of how those images are "hierarchical" or "generic" as claimed.

The remaining references also do not overcome the deficiencies discussed above (Chun et al. and Strahm et al.). Neither of the remaining references teaches or suggests a modification to Huttenen et al. or Jackel et al. that would overcome the deficiencies identified above.

Independent claim 15 has been amended to incorporate language from claims 22 and 23, which were deemed in the previous Office Action to be allowable if rewritten in independent form.

None of the applied references, alone or in combination teaches or suggests the subject matter of Independent claim 40.

Amended independent claim 45 recites, among other features, the following:
storing a plurality of generic service names in a database in the memory, each of the generic service names being mapped to a plurality of alternate information resources in a plurality of different languages, wherein said alternate information resources provide a common type of service, and further wherein a generic service name mapped to a non-default information resource has overridden a generic service name mapped to a default information resource

None of the applied references, either alone or in combination, teach or suggest a processor performing as recited in amended independent claim 45. For example, the references fail to teach or suggest the generic service name mapped to a non-default information resource has overridden a generic service name mapped to a default information resource. The Huttenen

et al. table assigns an IP address to each base station, but the reference does not identify any such overriding or a default information resource.

Independent claim 48 has been amended to incorporate language from claim 49, which was deemed allowable if rewritten in independent form.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pierre-Louis Desir whose telephone number is (571) 272-7799. The examiner can normally be reached on Monday-Friday 8:00AM- 5:30PM.
